			provisional data

Compare Pine Jan 2010 (~ 11") with this Jan (0.02"), & you can understand "weather" vs "climate". Weather is the storm-by-storm or month-by-month (season-by-season) vagaries of precipitation & temperature. Climate in a given area may be referenced as the long-term average of stations in that area, so the Rim & Payson means in the above table give us an indication of the precipitation climate in those areas. Pine & Payson precipitation for this January varied by only 0.01", so they overlap each other on the scale of my graph. NOAA's prediction for January (below average precipitation) was certainly true, but their "warmer" than average winter, so far, is way off. Plumbers are enjoying a lucrative winter so far, with water pipes busting all over, including my own.
